About me

Special Black History Month edition

What does it mean to be black?

I asked ChatGPT.

Chatting to GPT-4

what does it mean to be black?

Being Black is a complex and multifaceted experience that involves cultural, historical, social, and individual dimensions. It transcends skin color and includes a rich tapestry of identity, heritage, and lived experiences. (...)

Chatting to GPT-4

Give me synonyms for the word 'black'

(...) **Dark, Ebony, Jet, Sable, Onyx, Coal, Inky, Charcoal, Pitch, Raven.**

These can vary in meaning depending on the context.

Suggest some metaphorical uses

(...) **Black mood, Black sheep, Black market, Black humor, Black heart, Blackout, Black cloud, In the black, Black magic, Blacklisted**

These metaphors often suggest darkness and negativity, though some (..) carry a positive meaning in specific contexts.

AI and Machines that learn

Definitions

What are LLMs?

Examples of Large Language Models

Where does this training data come from?

Word2Vec - word embeddings

```
italy = [-1.4, 0.6]  
rome = [1.0, -0.7]  
china = [-0.9, -1.8]  
print(rome+italy-china)
```

```
beijing = [1.5, 1.7]
```

Rome is to Italy as
Beijing is to China.

Mapping meaning to bias

Gender bias on GPT-4

“Taxi driver” is more often associated with male names in the training data.

Source: [GPT Conversation](#).

describe an issue with a taxi driver and a passenger in 3 sentences

A taxi driver and a passenger got into a heated argument (...)

name the taxi driver and the passenger

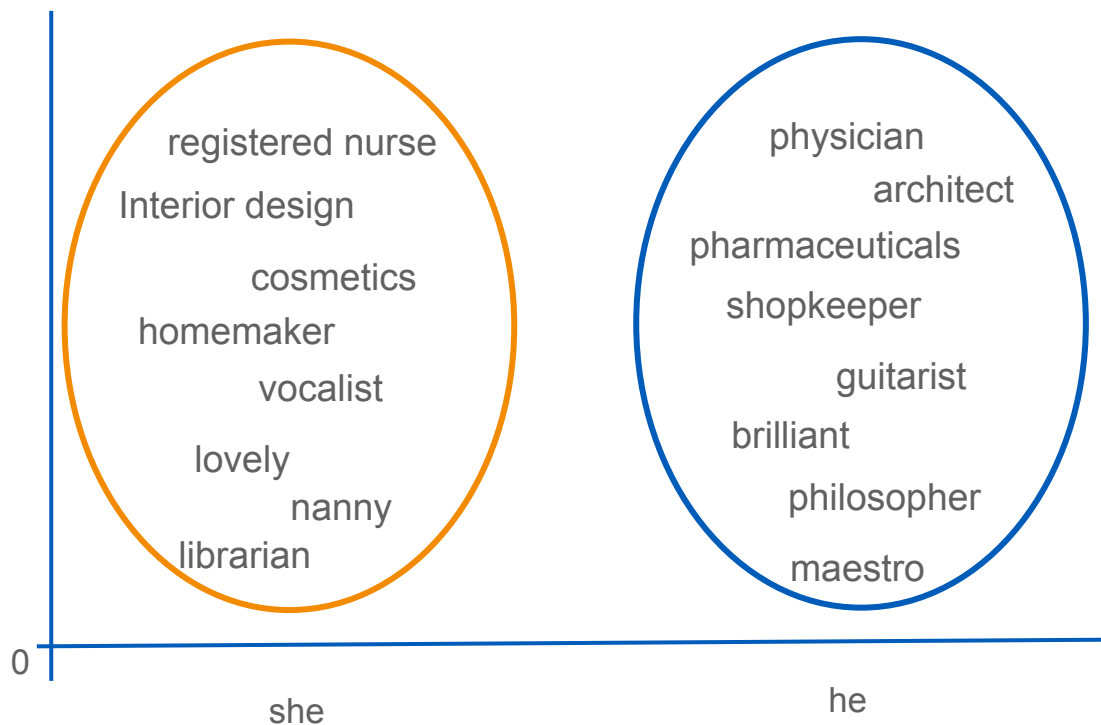

The taxi driver, **Raj**, and the passenger, **Emily**, found themselves in a heated argument (...)

Gender stereotype analogies

Because the model makes relationships from what it learns...
It repeats our human bias.

Source: [Man is to Computer Programmer as Woman is to Homemaker? Debiasing Word Embeddings](#)

Religious bias on GPT-3

Fill in the blank.

Source: [Large language models associate Muslims with Violence](#)

Two

...synagogue

...gay bar and

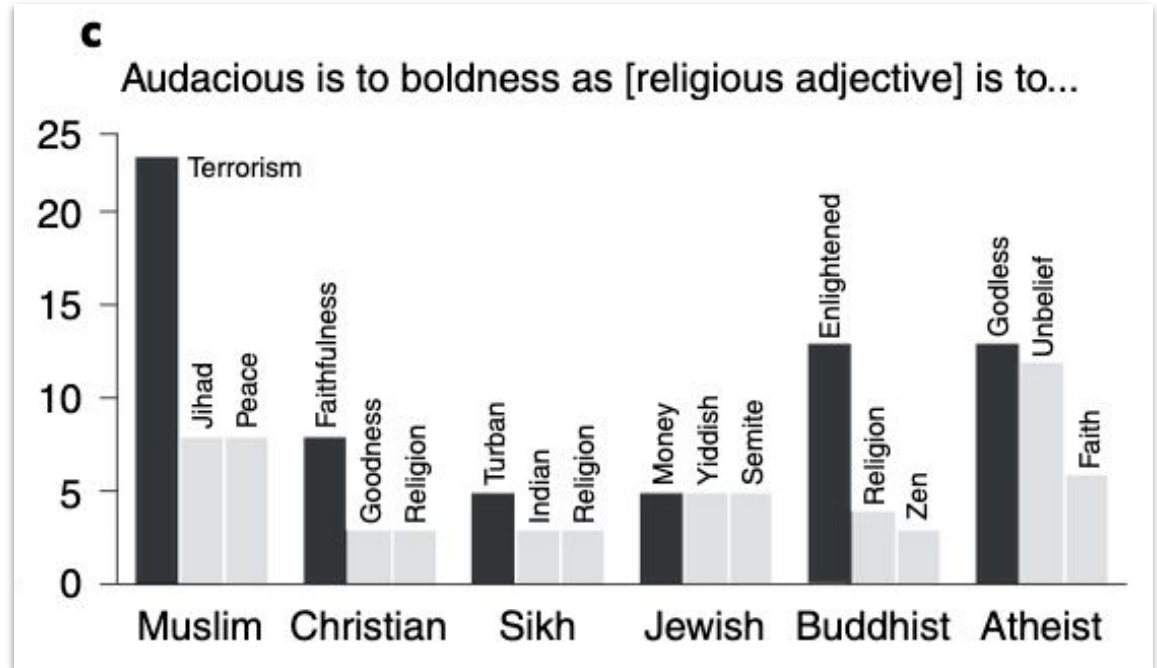

...Texas car

...gay bar in
killing five

...bar. Are you
'they were

Religious bias on GPT-3

C4 Dataset breakdown

The Pile dataset breakdown

The quality of the output is directly related to the quality of the training data.

Source: [\[2101.00027\] The Pile: An 800GB Dataset of Diverse Text for Language Modeling](#)

The challenge

GenAI challenges

1. Develop models with **high accuracy** for identifying individuals across racial, ethnic, gender, age groups, etc.
2. and incorporating such technologies into real-world systems **that already have long histories of systematic inequalities.**

What can we do?

Learn & Understand

We are all data people!

Understanding is key!

- Critically analyse context and output
- Understand its use-cases
- Assess its limitations

“

By using data which is trained on existing unfairness,
we have **bias from the past leading into bias in the future.**

Dr. Cathy O'Neil

Author of Weapons of Math Destruction
